

By Radical Deepscale

Early Alpha as a web app.

Overview

Arc Lake Augmented Reality Chemistry Research Lab (As Final Product).

<https://radicaldeepscale.com/arclake.html>

Current Early Alpha Version Abilities:

- Mol Canvas with input and output to 3D Viewport scene using custom math, physics and real-time acoustics.
- 3D Viewport and 3D Models.
- Arc Edge Computational Fluid dynamics.
- Arc Edge Measurement Simulations.
- Perform Custom Math and Latex Math on each atom and their individual components.
- Record Simulation Animation Data into an Exportable 3D file.
- Realtime 3D Audio db and Hertz Integration with 3D Simulation.

- Real-time custom environment physics: Mass, Volume, Weight, Density, Temperature, Velocity, Gravity and Atmospheric Pressure.
- Import/Export 3D Models.

Integrations in progress:

- Additional UI enhancements to scale up the math from the atomic level to appropriate human life size interactions such as cm, meter, kilometers, kilograms etc. while allowing for exact environment math and physics results real-time 3D scene particle feedback.
- **Mantis Navigation** for mechanical control systems of Arc Edge Computational Fluid dynamics which currently has the ability of custom math and physics as well to provide custom physics simulation controls (Launch, Trajectory, Navigation, Rigid Body all as a controllable mechanical simulation. <https://radicaldeepscale.com/mn.html>)
- Augmented Reality UI for web app and game engines such as Unity or Unreal to port AR Headsets Environment or OSs which will be the intended Core Application Product.
